WR320537 Marean Lake Project
Project Fact Page

With the assistance from local representatives, SaskEnergy is determining the level of interest for natural gas service at Marean Lake.

The sign-up sheets are intended to gauge the level of interest and does not commit the individual in anyway.

Quick Facts:

- The CONCEPTUAL cost for a residential service ranges from $9,000 - $12,000.
- Costs are based on a sign up target of 300-350 services.
- Costs include a standard residential service and meter to one permanent structure on the lot (cabin or garage). Commercial customers should contact SaskEnergy for an individual price quote.
- If there is sufficient interest, SaskEnergy will provide a written formal quote to those interested at which time people can sign and commit to natural gas service.
- Upon confirmation of the project proceeding, SaskEnergy will invoice a 25% deposit. The balance will be invoiced upon completion of the main infrastructure when natural gas is available to the community.
- For those that are not ready for service (planning new construction or renovations), they can sign-up and pay the project price to ensure the project proceeds and can have their service installed at a later date at no additional cost. Site Readiness for Residential Service | SaskEnergy
- The Project Price is expected to be valid for a 10-year period after the project proceeds, which may be extended at SaskEnergy's discretion. However, SaskEnergy does not guarantee adequate capacity to serve new customers over this entire 10-year time frame. If the pipeline capacity is fully allocated at any time the current Project Price will no longer be in effect SaskEnergy will determine a new Project Price for serving future customers in the community.
- Natural gas remains one of the most economical energy sources to heat your home and hot water. Please refer to our website at: Energy Comparison Tool | SaskEnergy
- The natural gas rates for SaskEnergy are postage stamped so Marean Lake will have the same natural gas rates as other communities in the Saskatchewan: Rates | SaskEnergy

Tentative Timelines for the Project:

Level of Interest:	September 2021
Final Design & Formal Quote:	December 2021 (Pending Interest)
Sign Up Deadline:	January/February 2022
Construction Start-up:	Summer/Fall 2022 (Pending Approvals)
